

INNOVATING MIDLINE PLIF with **PROLIFT** and **CENTERLINE**

- MINIMIZED RETRACTION
- CONTROLLED DISTRACTION
- DISC HEIGHT RESTORATION

EXPAND MORE. DISTRACT LESS.

PROLIFT is an expandable lumbar fusion device providing controlled in-situ expansion. With a compressed delivery, **PROLIFT** reduces impact while expanding to properly restore disc height.

CENTERLINE is a midline screw system providing enhanced cortical fixation through a less invasive surgical approach. Low profile cobalt chrome tulip heads improve visualization without compromising strength.

INNOVATING MIDLINE PLIF

MIDLINE PLIF is a less invasive approach providing enhanced fixation with the potential for reduced OR time and faster recovery. With industry leading expansion and cobalt chrome screws, Life Spine's **MIDLINE PLIF** is becoming the industry standard in less invasive surgery.

Using **PROLIFT** and **CENTERLINE** together allows surgeons complete controlled expansion, reduced anatomical disruption, and helps promote fusion.

**Midline
PLIF**

PROLIFT
Small - Expands 8mm - 13mm
Large - Expands 10mm - 14mm

CENTERLINE
4.5mm x 25mm - 50mm (5mm Increments)
6.0mm x 25mm - 50mm (5mm Increments)
6.5mm x 25mm - 50mm (5mm Increments)
7.5mm x 30mm - 50mm (5mm Increments)
